

Puff Plaza — User manual

This document explains how the **Puff Plaza** web application works for every role: what each person can do, how orders move through the system, and where to find main features. The interface is **bilingual (English / Arabic)** with a language toggle in the header.

For **installation**, environment variables, and developer setup, see the root **README.md**.

A printable **PDF** is kept at **docs/USER_MANUAL.pdf**. Regenerate it after editing this manual (requires **Google Chrome** or **Microsoft Edge**, and internet access for the workflow diagram): run `node scripts/export-user-manual-pdf.mjs` from the repository root.

1. Roles at a glance

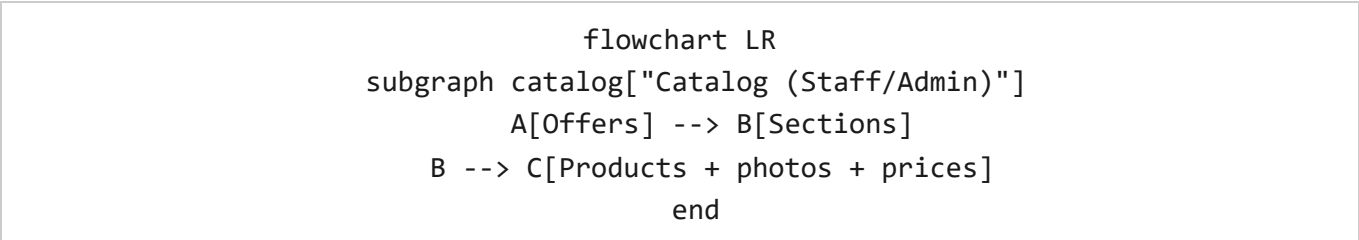

Role	Who they are	Main purpose
Staff	Operations team	Manage catalog (offers, sections, products), advertising, "How it works", view all orders, copy order text, upload receipts for customers if needed, manage customer accounts, view statistics and overdue notifications.
Admin	System owner	Everything Staff can do, plus system settings (notification email, header social links, contact link), manage staff and customer accounts, and delete orders from the system.

Access rules (simplified)

- **Customer** pages: My Orders, Favorites, Profile — only when logged in as a customer.
 - **Staff panel** (/staff/...): Staff and Admin.
 - **Admin settings** (/admin/settings): **Admin only**.
 - **Manage accounts** (/admin/users): Staff and Admin (scope differs: Staff sees customers only; Admin sees staff + customers).
-

2. End-to-end order workflow

This is the main business flow shared by all roles.

```

    subgraph shop["Shop (Customer)"]
      D[Browse / Favorites] --> E[Place order]
      E --> F[Order: awaiting receipt]
    end
    subgraph after["After delivery"]
      F --> G[Upload receipt]
      G --> H[Order: delivered + stats]
      H --> I[Optional feedback]
    end
    catalog --> shop
    Staff[Staff / Admin] --> F
    Staff --> G

```

1. **Staff/Admin** creates **offers** (with codes, delivery fee rules, optional **promo codes**), **sections** inside an offer, and **products** (name, price, photos, optional product-level promo). 2. **Customer** opens the **home page**, picks an offer, finds a product, and clicks **Order** (must be logged in, with **emirate** and **address** on profile for checkout). 3. The order is created in status **ordered** (awaiting delivery / receipt). A **new-order notification** can be sent to the configured notification email (see §7). 4. When the goods are delivered, **Customer** (or **Staff/Admin** on behalf of the customer) uploads a **receipt** (image or PDF). The order becomes **delivered** and contributes to **statistics**. 5. The customer may submit **feedback** on delivered orders. 6. **Admin** may **delete** an order entirely (rare correction path); Staff cannot delete orders.

Promo / discount codes

- Customers can enter an optional **promo code** at checkout if staff configured a matching code on the **product** or the **offer** (with valid expiry and discount percent).
- When a code is used, it is stored on the order and appears in **order notification email text** and in the **staff “copy order text”** block for traceability.

3. Customer guide

3.1 Account

- **Register**: name, phone, email, password, UAE **emirate**, delivery **address**.
- **Login / Logout** from the header.
- **Profile**: update name, phone, emirate, address, and password.

Without **emirate + address**, the site blocks placing an order and asks the customer to complete the profile first.

3.2 Shopping

- **Home**: lists **active offers**; search products; open an offer to see **sections** and **products**.

- **Product card**: shows price per unit, **Order now**, optional **favorite** heart, and **promo** badge when a valid promo exists on product or offer. If the product has **no photo**, the large image area is hidden.
- **Favorites**: saved products for quick access; order flow is the same as from the catalog.

3.3 Placing an order

- Click **Order now** on a product.
- Set **quantity**, optional **notes**, optional **promo code** (must match an active configured code or the order is rejected).
- Review **delivery fee** (from the offer's fee schedule and quantity) and **estimated total**, then confirm.

After success, use **My Orders** to track the order.

3.4 After delivery

- **My Orders**:
 - For **ordered** status: read the hint and **Upload receipt** (jpg, png, or pdf within size limits). - For **delivered**: view receipt, optionally **remove receipt** (returns order to ordered — customer-only for removal), and submit **feedback** text.
- Customers **cannot** see other users' orders.

3.5 Header (everyone)

- **Social icons** and **Contact us** appear when the **Admin** configured URLs in **Admin → System settings** (see §7).

4. Staff guide

Open **Staff panel** from the nav after login. The **dashboard** links to all staff tools.

4.1 Manage offers

- Create, edit, or **disable** offers (code, title, dates, delivery fee schedule, optional **offer-level promo**: code, expiry, discount %).
- **CSV import** of products is available at offer level where supported.

4.2 Sections & products

- For each offer: define **sections** (grouping), then **products** inside a section.
- Per product: names (AR/EN), prices, marketer fee, **photos**, active/inactive, optional **product-level promo**.
- Staff can **toggle** product active state and use **bulk** tools where provided.

4.3 Content

- **Advertising board:** create/edit slides shown on the landing page.
- **How it works:** edit the steps/content shown to visitors.

4.4 Operations

- **Order history:** all customers' orders; **copy** formatted order text (similar to email content) for WhatsApp or manual processes; **upload receipt** for an **ordered** order if the customer did not; view receipts for **delivered** orders.
- **Notifications:** list **overdue** orders (past expected delivery / receipt flow — per app logic).
- **Statistics:** successful orders, totals, marketer fees, commission collected vs pending.
- **Mark commission:** use the commission toggle on an order where the UI exposes it (staff workflow for fee collection).

4.5 Accounts (Manage users)

- **Staff** may list/create/delete/**reset password** for **customers only**.
 - **Staff cannot** create or delete **staff** or **admin** accounts.
-

5. Admin guide

Admin includes **all staff capabilities**, plus:

5.1 System settings (/admin/settings)

- **Notification email:** where **new order** and **receipt uploaded** notifications are sent (also related app settings in database).
- **Header links:** optional URLs for **Instagram, Facebook, TikTok, YouTube, X, Snapchat, WhatsApp**, and a **Contact us** link (shown in the site header when filled).
- **Social URLs** must be http:// or https://. **Contact** may also be mailto: or tel:.

5.2 Manage users

- **Admin** sees **staff** and **customers** (not themselves in the list logic the same way — cannot delete self).
- Can create **staff** or **customer** accounts, delete users, reset passwords (per API rules).

5.3 Orders

- **Admin** may **delete** an order (removes receipt file and adjusts statistics if the order was delivered). Use only when correcting mistakes.
-

6. Language & layout

- Use the **EN / ع** toggle in the header to switch **English** and **Arabic**; Arabic uses **RTL** layout where applicable.
-

7. Email and configuration (reference)

- **Order placed**: notification to the configured address with order and customer details; includes **promo code and discount** when applicable.
- **Receipt uploaded**: separate notification when a receipt is submitted.
- Mail delivery depends on **server SMTP** (and optional **Resend** API key in backend env if configured by developers).

Default seeded logins (change immediately in production) are defined in **DatabaseSeeder** — see **README.md** / seed file for current example emails. Always run **php artisan db:seed** only in controlled environments.

8. Quick URL map (frontend)

Path	Audience
/login, /register	Everyone
/profile	Logged-in users
/orders	Customer — my orders
/favorites	Customer
/staff	Staff, Admin — dashboard
/staff/offers	Staff, Admin
/staff/offers/:id/sections	Staff, Admin
/staff/offers/:id/sections/:sid/products	Staff, Admin
/staff/board	Staff, Admin
/staff/how-it-works	Staff, Admin
/staff/notifications	Staff, Admin
/staff/order-history	Staff, Admin
/staff/statistics	Staff, Admin

Path	Audience
/admin/users	Staff, Admin (different permissions)
/admin/settings	Admin only

9. Glossary

Term	Meaning
Section	Grouping of products inside an offer.
Marketer fee	Fee associated with the product/offer model; shown in orders and statistics.
Receipt	Proof of delivery upload; marks order delivered when accepted.
Stateful domains	Backend CORS / Sanctum settings for browser origins — see <code>README.md</code> and <code>.env.example</code> for local vs production.

Document version: matches application features as of the `docs/USER_MANUAL.md` addition. If behavior changes, update this file alongside code changes.
